

## Civil

March's civil group has a wealth of experience in civil works infrastructure development for all types of industrial sites. Our personnel have been involved in conceptual and detailed design in all aspects of civil engineering including site grading and drainage, water retention ponds, access roads and in-plant road systems, rail spurs and rail yard layout, and utility delivery systems. Our experience, ranging from feasibility studies, basic engineering, detailed design, site commissioning, and construction management assures a practical and cost-effective solution to siting and infrastructure development requirements.

**Site Layout**

**3D Site Modeling**

**Grading and Drainage**

**Railways**

**Roads**

**Tailings and Waste Disposal**

**Utilities and Buried Services**
